EDUCATION

Vimal Jyothi Engineering College

B.Tech in Artificial Intelligence and Data Science CGPA: 9.46 / 10

- Minor in Electronics and Communications

Chemperi, Kerala

Sep. 2024 – May 2028

TECHNICAL SKILLS

Web & UI: Angular, Tauri, Bootstrap, HTML/CSS

General Purpose: JavaScript, TypeScript, Python, Java, MySQL

Backend & Systems: Rust, C/C++, Zig

Data & APIs: JSON, SQL, REST, Pandas, NumPy

Developer Tools: Git, Make

PROJECTS

Chultrabook Tools 🛠️ | *Rust, Tauri, Angular, TypeScript*

May 2023 – Present

- Cross-platform desktop application built with Tauri and Angular serving 45,000+ users on Windows, macOS, and Linux; features custom fan control, hardware diagnostics, keyboard backlight management, and key remapping
- Designed a reactive Angular frontend consuming a Rust backend IPC layer, delivering real-time sensor data and hardware controls through a polished, component-driven UI
- Modular architecture decoupling hardware-specific logic from the UI layer, enabling rapid integration of new Chromebook generations with minimal frontend changes
- Managed the full software lifecycle from initial development through continuous releases, incorporating community feedback to iteratively improve UX

One-Click Driver Installer & Hardware Database 🛠️🛠️ | *Rust, JSON, SQL*

Sep. 2024 – Oct. 2024

- End-to-end system comprising a Rust CLI installer and a structured JSON/SQL hardware compatibility database, serving 5,000+ users across Chromebook alternate OS deployments
- Designed a database schema cataloging 200+ Chromebook models with chipset and driver mapping; dynamic runtime fetch eliminates the need for application rebuilds when new models are added

Stock Market Price Predictor 🛠️ | *Python, TensorFlow, Matplotlib, Scikit-Learn*

Feb. 2025 – Mar. 2025

- Built a data pipeline that fetches historical stock data via Yahoo Finance, preprocesses it with MinMax scaling, trains a stacked LSTM model, and exports 30-day price predictions as JSON
- Developed interactive Matplotlib dashboards displaying actual vs. predicted price curves and training/validation loss, providing intuitive visual feedback on model performance

Various Emulators | *Rust, C++, Zig*

Oct. 2024 – Present

- **Game Boy (DMG) 🛠️:** Cycle-accurate emulator in Rust implementing CPU, PPU, MBC mappers, scanline rendering, sprite compositing, and OAM DMA timing
- **XO-CHIP 🛠️ / CHIP-8 🛠️🛠️:** Interpreters in Zig, Rust, and C++ with full opcode coverage, dual display planes, and framebuffer graphics with collision detection

EXPERIENCE

Open Source Contributor

May 2023 – Present

Chultrabook Project

Remote

- Maintained Chultrabook Tools, a cross-platform desktop utility with 45,000+ downloads, handling feature development, bug fixes, and community-driven improvements
- Collaborated with distributed contributors to ship documentation updates, UI improvements, and hardware compatibility expansions across multiple releases
- Provided technical support for community members, translating user-reported issues into actionable bug fixes and feature additions
